DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-4, 6-10 and 12 are rejected under 35 U.S.C. 102(e) as being anticipated by Schultz (US 6,208,988).

Schultz teaches a method and system for identifying themes associated with a search query using metadata and for organizing documents responsive to the search query in accordance with the themes, comprising:

As per claims 1 and 7,

loading each of said meta-data described by definitions that each publisher providing said electronic article defines differently by absorbing said different definitions (column 1, lines 49-67);

storing data loaded by said meta-data loading step in a database (column 1, lines 49-67);

providing search means for searching through said database (column 1, lines 49-67);

Art Unit: 3629

obtaining said electronic article based on link information indicated by said meta-data (column 1, lines 49-67).

As per claims 2 and 8, said method and system, wherein said meta-data is an article bibliography or an article subscriber of said electronic article and link information indicating a place where its original article is placed electronically (column 10, lines 51-62).

As per claims 3 and 9, said method and system, further comprising:

storing subscriber's additional information in a subscription master, wherein said search means comprises access right authorization means for authorizing a subscriber's access right based on information from said subscription master (column 6, lines 22-43).

As per claims 4 and 10, said method and system, further comprising a billing means for billing a subscriber based on information from said subscription master when a search is executed (column 5, lines 43-60).

As per claims 6 and 12, said method and system, wherein said meta-data is provided by each of said publishers over said computer network or through an auxiliary memory medium (column 2, lines 57-60).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 5 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schultz in view of Martin et al. (US 6,272,484).

As per claims 5 and 11, Schultz teaches all the limitations of claims 5 and 11, including transmitting electronic files over the Internet (column 6, lines 15-16).

However, Schultz does not specifically teach that said files are stored in Generalized Markup Language or Extensible Mark-up Language formats.

Martin et al. teach a method and system for managing electronic documents, wherein Generalized Markup Language or Extensible Mark-up Language formats are used for managing electronic files (column 6, lines 29-33).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Schultz to include that said files are stored in Generalized Markup Language or Extensible Mark-up Language formats, because it appears that the claimed features do not distinguish the invention over similar features in the prior art, and the teachings of Schultz would perform the invention as claimed by the applicant with any known formats suitable for managing electronic files.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure (see form PTO-892).
